Revision 12.4.0
26-Nov-2008

1	Version 12.4.0: 26-Nov-2008	3
1.1	Other Updates	3
2	Version 12.3.0: 10-Nov-2008	3
2.1	Other Updates	3
3	Version 12.2.0: 30-Oct-2008	3
3.1	Other Updates	3
4	Version 12.1.0: 15-Oct-2008	3
4.1	Other Updates	4

1 Version 12.4.0: 26-Nov-2008

Bug	Resolution

1.1 Other Updates

1. Updated TLS certificates. In previous versions this year, we forgot to update the certificates to be valid for another year.

2 Version 12.3.0: 10-Nov-2008

Bug	Resolution
48	The MESA C-move application incorrectly reported an error at the end of the c-move request. We found the error and corrected it.

2.1 Other Updates

1. Repaired Unix installation error. Correct database Makefile to properly drop svcs tables.

3 Version 12.2.0: 30-Oct-2008

Bug	Resolution

3.1 Other Updates

1. Updated TLS certificates. Old certificates expired Nov 2008.
2. Added TLS programs. They were missing from 12.1.0 distribution
3. Added REM test 4404 for Image Manager.
4. Added Content Creator and Content Consumer tests for sample documents. Participants now have a way to load sample XML documents into Kudu for sharing.

4 Version 12.1.0: 15-Oct-2008

Bug	Resolution

125	Could not replicate the problem, and there were no reports during the fall of 2007. Consider this one closed unless there is new information.
163	PD Consumer test was run from the wrong folder, so the configuration was not properly done. Advised user to move to the proper folder.
171	Repaired format of callback phone numbers in all radiology and cardiology messages.
178	Changed the encoding for the country from JAPAN to JPN to match ISO 3166
179	We believe the XPN issues are escape sequences for Japanese character sets.
180	XCN encoding in 231.104.o01.hl7 was incorrect. We moved DR prefix to the proper position.
182	Japanese character encoding is intended for Japanese implementation testing
190	Repaired documentation for Acquisition Modality test 231
214	Removed the requirement in PDQ queries to include QPD 8.5. That was a mistake in the tests. PDQ queries should only include QPD 8.4
216	The XRef Mgr issue was really an installation problem. No fix to MESA tests needed.
217	Fixed the message that labels the merge request. It is an A40 and not an A04 is printed in the runtime instructions.
219	Fixed the document UIDs in tests 20308 and 20309

4.1 Other Updates

5. Changed the default database for Windows to SQL Server 2005 Express and updated installation instructions. If you still want to test using SQL Server 2000, let us know and we will make a release version for you.
6. Add PCC Content Creator tests for APR profile:
 - a. 40312, 40313, 40315, 40316, 40317, 40318, 40325, 40326
7. Added a Value Set Repository using the HTTP binding. Included one sample value set. We need to translate existing code tables into these documents.
